PATIENT SAFE LISTS
## Quick tips for creating and editing allergen lists

CREATE PATIENT SAFE LIST: NEW PATIENTS

Use this default option when your patient is brand new and has never been issued allergen search codes or registered in CAMP.
1 **Create Patient Safe List**

2 **Add Allergens**

Select Common Allergens

Q Type allergen name to search

Allergen

3 **Verify Cross-Reactor Groups**

Cross Reactor(s)   Fragrance
Select ▼
                          Select ▲
Choose Standard or Restrictive
(Click on the checkbox to select Standard or Restrictive)
☑ Standard   ☐ Restrictive

⚠️ Some cross-reactor groups offer choices. Groups selected here can significantly impact a patient's safe list product options!
UPDATE PATIENT SAFE LIST: EXISTING PATIENTS

Use this option when your patient already has access to CAMP and the current allergen list needs to be modified due to a late read or additional testing.
1 **Update Patient Safe List**

2 **Enter Patient's Codes**

Code1   Code2
Code 1   Code 2

Edit Patient's Allergens

3 **Add or Remove Allergens**

Select Common Allergens

Q Type allergen name to search

Allergen

4 **Verify Cross-Reactor Groups**

Cross Reactor(s)   Fragrance
Select ▼
                          Select ▲
Choose Standard or Restrictive
(Click on the checkbox to select Standard or Restrictive)
☑ Standard   ☐ Restrictive

Next

Select "Next" to save changes to the allergen list. Instruct the patient to log out and back into their CAMP account to view the updated allergen list.

1. UPDATE codes when there are changes to an existing allergen list rather than generating new ones.
2. CAMP users who receive new codes after they have already registered must have their accounts reset by CAMP staff and complete registration again.
3. Codes cannot be combined. Please be sure all allergens are included on one list.
4. CAMP staff cannot update or modify your patient's allergen search codes.
